

Authenticatable

```
classDiagram
    class Authenticatable {
    }
    class "App\Models\User" {
        # $fillable
        # $hidden
        # $casts
        + loans()
        + static validateData(array $data)
        + static createUser(array $data)
    }
    "App\Models\User" --|> Authenticatable
```

The diagram illustrates a class hierarchy. At the top is the 'Authenticatable' class, represented by a rectangle with three horizontal compartments. The top compartment contains the class name. Below it are two empty compartments. At the bottom is the 'App\Models\User' class, represented by a larger rectangle with a grey background, divided into three sections. The top section contains the class name. The middle section contains three attributes: '# \$fillable', '# \$hidden', and '# \$casts'. The bottom section contains three methods: '+ loans()', '+ static validateData(array \$data)', and '+ static createUser(array \$data)'. A blue arrow with an open triangle head points from the 'App\Models\User' class up to the 'Authenticatable' class, indicating that 'App\Models\User' inherits from 'Authenticatable'.

App\Models\User

\$fillable

\$hidden

\$casts

+ loans()

+ static validateData
(array \$data)

+ static createUser(array
\$data)
